

The ISSUE: There appears to be a plugin or theme that is causing specific features from the “Optima Express” plugin not to work. My best guess is that it is a JavaScript conflict.

WHAT I NEED YOU TO DO: I need you to figure what is causing the “Optima Express” plugin not to work properly and to fix it. I need to know exactly what the source of the issue is and exactly what code you changed to get it to work.

HOW WILL I KNOW IF FINISHED THIS TASK: You will know you successfully finished this task when the following is completed:

- 1) You are able to get every item listed working and you will not break anything in the progress. So you need to figure out and resolve the issues I listed below without creating new issues for me.
- 2) Get confirmation from me that you have actually fixed my issues without causing new issues.
- 3) Communicate to me in written form what all you did to get all my issues resolved

See below details on the items I want you to troubleshoot and resolve:

1. Go to this page:
<http://aledohomesbyclaudia.com/clone/homes-for-sale-details/101-Columbia-Ave-Roseville-CA-95678/14062648/13/>
2. The left and right arrow images on the picture slider do not work. When you click on the left or right arrow, it should rotate to the next image.

3. None of the tabs work. When you click on a tab, it should switch to the tab and show you the information on the selected tab. As you can see all the tabs are blank and do not work.
